

“The Content Management System is great and I am really finding my way round it.”

Michael Radford,
Wellesley House School

SEA Publish

SEA Publish is a straightforward, easy to use content management system (CMS) that gives you complete control over the content of your website.

Designed and built by SEA, SEA Publish allows you to manage every page on your website using a simple, yet powerful interface. After just a short training session, you'll be able to change and update text and add and remove images, videos and documents.

One of the first things our clients say about SEA Publish is how easy it is to use. Even web novices have no trouble updating their own website after a short training session.

We have listed the main features of SEA Publish below, but ideally you need to try the system yourself to see how easy it is. If you'd like to 'test drive' SEA Publish, please [click here](#) to request a demonstration or telephone us on **01227 768808**.

seaPublish Features

- Full editing capabilities - create unlimited pages and articles
- Login using a browser from anywhere in the world
- WYSIWYG editor for easy content creation
- Fully customisable navigation and site structuring
- Latest News module (RSS feeds)
- Events and calendar module (RSS feeds)
- Set pages or news items to go live (or archive) on a specific date
- Update global items
- Template based/CSS-driven
- Flexible page layout
- Manual HTML content editing
- Media and document library
- Video/audio streaming/RSS
- Image cropping and automatic re-sizing
- No restriction on design creativity
- 3D & 2D picture galleries
- Easy insertion of Google analytics or other tracking code
- Enquiries handler
- Social bookmarking component for web page distribution, generating traffic and back links.

Search Engine Optimisation

- Search engine friendly pages (header hierarchy's, freedom over organic page search engine optimisation)
- Page link no-follows (stop Google from scanning pages that won't help your organic search engine optimisation ranking; e.g. company terms and conditions).
- Write your own file names (URL's)
- Meta title
- Meta descriptions
- Metakey words
- Image alt tags
- Full indexing and site search capabilities

Client Login and User Management

- Add users and assign component and menu authoring privileges
- Edit/update user information
- Change passwords (administrators only)

Security

- Sever-side validations
- HTML (post data) tampering validation and unsafe HTML checks
- Password encryption/secure login
- URL tempering
